How to print 4 pages in 1 page pdf. How to print one page into 4 pages. How to print 4 pages in 1 page in word. How to print 4 pages on one page word.

Acrobat User Guide Introduction to Acrobat Workspace Creating PDFs Editing PDFs Scan and OCR Forms Combining files Sharing, reviews, and commenting Saving and exporting PDFs Security Electronic signatures Printing Accessibility, tags, and reflow Searching and indexing Creating PDF indexes Searching PDFs Multimedia and 3D models Print production tools (Acrobat Pro) Preflight (Acrobat Pro) Color management Booklets are documents with multiple pages arranged on sheets of paper that, when folded, present the correct page order. You can create 2-up saddle-stitched booklets, where two side-by-side-pages, printed on both sides, are folded once and fastened along the fold. The first page prints on the same printed sheet as the last page. The second page prints on the same sheet as the second-to-last page, and so on. Each page is automatically centered on the sheet, and large pages are scaled (shrunk) to fit the printable area. When you collate, fold, and staple the double-sided pages, the result is a single book with correct pagination. To print booklets, your printer must support either automatic or manual duplex printing (printing on both sides of the paper). Manual duplex printing requires two separate printing passes: one to print the front side, and another to print the back side. To find out whether your printer supports duplex printing, check the printer manual or contact the printer manufacturer. Multipage document (left), pages arranged in booklet layout (center), and pages printed and folded into new booklet (right) Choose File > Print and select the printer. Specify which pages to print: To print pages from front to back, select All. To divide a large booklet into smaller groupings, select Pages and specify a page range for the first grouping. Print each page range separately. To print certain pages on a different paper or paper stock, specify those pages using the Sheets From/To option. Click the Properties button and select the correct paper tray and any other options as necessary. Choose additional page handling options. The Preview image changes as you specify options. Determines which sides of the paper print. Choose Both Sides to automatically print both sides of the paper (your printer must support automatic duplex printing). Choose Front Side Only to print all pages that appear on the front side of the paper. After these pages print, flip them, choose File > Print again, and choose Back Side Only. Depending on the printer model, you might have to turn and reorder the pages to print the back sides. If your printer does not support Automatic Duplex printing, you'll need to turn or flip the pages and feed them back in. The exact steps depend on your printer model, and you can update the settings using the printer Properties in the Print dialog box. For more information, see Double-sided Printing. Auto-Rotate Pages Within Each Sheet Automatically rotates each page for the best fit in the printable area. Specifies the first and last sheet to print. Acrobat determines which sheets must print to accommodate the print job. For example, if you have a 16-page document, then sheets 1 through 4 print. Determines the orientation for the binding. Choose Left for text read left-to-right; choose Left (Tall) for paper folded on the long side, where the printable area is long and narrow. Choose Right for text read right-to-left or for Asian-style vertical reading; choose Right (Tall) for paper folded on the long side. Compare Right binding with Right (Tall). To prevent others in a shared printing environment from printing on your pages before you print the back side, consider printing the back side pages using a different paper tray. Print PDFs in a PDF Portfolio A PDF Portfolio contains multiple documents wrapped in one PDF. You can print the component PDFs in a PDF Portfolio individually or together. Documents print in alphabetical order, regardless of the order of files. Open the PDF Portfolio. To print only certain PDFs, select those PDFs. Choose File > Print, and then choose one of the following: Prints all the PDFs in the PDF Portfolio. Prints the selected PDFs. This option is available only when multiple files are selected in the list of component documents. Choose applicable printing options, and click OK. You must use the native application to print any component file that is not a PDF. To open a component file in its native application, right-click the file and choose Open File in Native Application. (The native application must be installed for you to open the file.) You can print the pages associated with bookmarks directly from the Bookmarks tab. Bookmarks appear in a hierarchy, with parent bookmarks and child (dependent) bookmarks. If you print a parent bookmark, all page content associated with child-level bookmarks also prints. Not all bookmarks display page content, and therefore cannot be printed. For example, some bookmarks open a file or play a sound. If you select a mix of printable and nonprintable bookmarks, the nonprintable bookmarks are ignored. Bookmarks made from tagged content always display page content because the tagged content represents printable elements in the document structure, such as headings and figures. Open a PDF with bookmarks. If necessary, choose View > Show/Hide > Navigation Panes > Bookmarks so the bookmarks appear in the navigation pane. Select one or more bookmarks, and then right-click the selection. Choose Print Page(s) from the menu. Multipage PDF printed as a booklet: four pages per sheet, printed both sides, left-side binding. Print a multi-page document as booklet: Select a printer from the menu at the top of the Print dialog box. In the Pages to Print area, select which pages you want in the booklet. All prints pages from front to back. Pages specifies a page range for printing a smaller grouping of a large booklet. You divide a large booklet into smaller groupings, and then print each page range separately. Under Page Sizing & Handling, choose Booklet. In the Booklet Subset pop-up menu, select one of the following options: Both sides (duplex printers) automatically prints both sides of the paper, if your printer supports automatic duplex printing, or Front side only / Back side only (for non-duplex printers). If your printer can't automatically print both sides, you can first print the front sides of the paper. Then reload those pages and print the back sides. Leave the numbers in the Sheets From boxes as they are. Acrobat or Reader determines which sheets must print to accommodate the print job. For example, if you have a 16-page PDF and you selected All in the Print Range area, then sheets 1 through 4 print. Select Auto-Rotate Pages to automatically rotate each page for the best fit in the printable area. Print a multi-page document as booklet: Select a printer from the menu at the top of the Print dialog box. In the Print Range area, specify which pages to print: All Prints pages from front to back. Pages Specifies a page range for printing a smaller grouping of a large booklet. You divide a large booklet into smaller groupings, and then print each page range separately. From the Page Scaling pop-up menu, select Booklet Printing. Additional controls appear beneath the Page Scaling pop-up menu. In the Booklet Subset pop-up menu, select one of the following options: Both sides (Duplex printers) Automatically prints both sides of the paper, if your printer supports automatic duplex printing. Front side only / Back side only (for non-duplex printers) If your printer can't automatically print both sides, you can first print the front sides of the paper. Then reload those pages and print the back sides. Leave the numbers in the Sheets From boxes as they are. Acrobat or Reader determines which sheets must print to accommodate the print job. For example, if you have a 16-page PDF and you selected All in the Print Range area, then sheets 1 through 4 print. Select Auto-Rotate Pages to automatically rotate each page for the best fit in the printable area. Choose an option from the Binding pop-up menu: PDFprintfriendlySave Money & the Environment Welcome to a free online tool for rearranging PDF document layout to print multiple pages per sheet (also called N-up printing). It can be used to position two (2-up) or more document pages side by side on one sheet, for example, to print a booklet or to reduce number of paper sheets needed to print the document. You can quickly join 2, 3, 4, or 6 pages in one, with several layout and orientation options. Available layouts are: 1x2, 1x3, 1x4, 2x1, 2x2, 2x3, 2x4, 3x1, 3x2, 4x1, 4x2, 4x3, 4x4, giving a maximum of 16 pages per sheet. Learn more on how to print web pages using Firefox's printing features. Note: If a web page is available in Reader View, you can print a simplified version of the page by clicking the Reader View icon in the address bar, before printing. This will save paper and ink by removing clutter such as ads and background images. To learn more, see Print simplified, clutter-free pages in Firefox. Click the menu button and then click Print.... This will open a print preview for that web page. Choose your printing options: Destination: Use the dropdown menu to choose the device or document to print to or save. Select in the drop-down menu to save the shown preview as a PDF file. Copies: Choose how many copies to make (available for printers and faxes). Orientation: Allows you to choose between portrait and landscape orientation of the printed page. Pages: Allows you to choose what pages you would like to print. Color Mode: This allows you to choose whether to print in color or black and white (this may not be customizable for some printers). More settings: Expand this section for more options, such as Paper size, Scale, Pages per sheet, Margins, Format (Original or Simplified, if available). Print headers and footers and Print backgrounds. (If you select Simplified under Format, you won't be able to select Print backgrounds.) After adjusting the settings, click Print to start printing. We have been gradually rolling out this improved print menu since Firefox version 82. If you do not see the new print menu described above, follow these alternative instructions: Click the menu button and then click Print.... In the Print Preview window that opens, adjust settings for what you're about to print, if necessary. See Print window settings below for information on what settings can be changed. Click PrintOK to start printing. Click the menu button and then click Print... to open the "print" menu. Adjust the settings as necessary. For more advanced settings click Show Details. See the "Default 'Print' Menu" and "'Print' Menu with Details Shown" sections for information on what settings can be changed. After adjusting the settings, click Print to start printing. Print: See Print window settings. Page Setup: Pages: Navigate to different pages by entering a page number or using the arrows. Scale: To try and make the web page fit on fewer sheets of printed paper, you can adjust the scale. Shrink To Fit automatically adjusts the scale. Orientation: Select Portrait for most documents and web pages. Select Landscape for very wide pages and images. Simplify Page: Select Simplify Page to remove clutter and save paper and ink when printing web pages. Remove unwanted ads, unrelated text and images, and blank spaces from the page to print your content on fewer pages. If this is available for the web page you're on, it will be black and clickable. Otherwise, it will be greyed out. Print window settings Select Printer section: Choose the printer you want from the list. You can move the slider below to see more printers. Note: The default printer is usually Microsoft Print to PDF. When a web page is printed with the selected printer, it becomes the new default printer. Click on Preferences to change the paper size, print quality, and other settings specific to your printer. Print range section: Lets you specify which pages of the current web page are printed. Select All to print everything. Select Pages and enter either a range of pages or a single page. For example, "1" prints only the first page and "3-5" prints the pages from 3 to 5. Select Selection to print only the part of the page you've highlighted. Copies section: Lets you specify how many duplicates you want to print. If you enter more than 1 in the Number of copies field, you can also choose whether to collate them. For example, if you choose to make two copies and select Collate, they will print in the order 1,2,3,1,2,3. Otherwise, they will print in the order 1,1,2,2,3,3. Note: The following settings are saved as Firefox preferences on a per-printer basis. Changing the page setup Format and Options The Format & Options tab allows you to change: Orientation: Select Portrait for most documents and web pages. Select Landscape for very wide pages and images. Scale: To try to make the web page fit on fewer sheets of printer paper, you can adjust the scale. Shrink to fit automatically adjusts the scale. Options: Select Print Background (colors & images) to have Firefox print backgrounds for web pages. Otherwise, Firefox leaves page backgrounds white. The Margins & Header/Footer tab allows you to change: Margins: You can enter the width of the page margins for the top, bottom, left, and right sides of the page separately. Headers & Footers: Use the dropdown menus to select what appears on the printed page. The top-left dropdown box's value appears at the top-left corner of the page; the top-center dropdown box's value appears at the top-center portion of the page and so on. Choose from: -blank-: Nothing will be printed. Title: Print the title of the page. URL: Print the web address of the page. Date/Time: Print the date and time when the page was printed. Page #: Print the page number. Page # of #: Print the page number and total number of pages. Custom...: Enter your own header or footer text. This can be used to show a company or organization name at the top or bottom of every printed page. Click OK to finish making changes and close the Page Setup window. The default print menu is what shows up before you click Show Details. This shows basic information for taking a page and printing as is, customizable settings: Printer: By clicking on the drop-down menu, you can select a printer to print from. Presets: Here you can select a preset for your printer to use when printing. Copies: This allows you to pick how many copies of the printed page you would like. It is followed by a checkbox so that you can decide if you want to print single, or double-sided. Pages: This allows you to choose what pages you would like to print. This is the print menu with both the default settings and more advanced settings that you can change. While the top section of this "Print" menu stays the same, the bottom section can be changed to show different settings by changing your selection in the drop-down menu around the middle of the menu. In the top section you can to change: Paper Size: Here you can select something different should you not be printing on the standard US Letter paper size. Orientation: Choose between portrait or landscape orientation. Scale: This changes how big or small the web page appears when printed. As the bottom section varies based on what is selected in the dropdown menu, these sections are laid out below. Firefox This section has options made possible specifically by Firefox: Option: Here you can choose to print the chosen selection only, and you can inform the printer to alter the scaling so that the printed image fills the width of the page. Appearance: This gives you the choice of printing background colors/images. Page Headers/Footers: This allows you to alter the header and footer of the page(s) printed using the selections from the drop-down menu. Layout This section has options on how the printer should print the web page(s) on each page: Pages per Sheet: This tells the printer how many web pages, or duplicates of the web page, should be placed on each sheet of paper. Layout Direction: This tells the printer what order the web pages should be printed in. Border: This allows you to choose a border in which the web page(s) will be contained. Two Sided: This allows you to choose where room should be made on a page for binding. As well as the option to flip or reverse page orientation. Paper Handling This section controls how the web page is printed. It has the following settings. Collate Pages: An option to tell your printer to organize pages by signature. Pages to Print: Choose what pages should be printed. Page Order: A section to let you decide how to order the printed pages. Destination Paper Size: What size of paper to be printed on. Cover page This section allows you to print a cover page before or after the printed pages. Water Mark This section allows you to add a watermark to what you print, choose what the watermark will be, and pick where on the page(s) the watermark will be. Supply Levels Should your printer be able to provide your computer with this information, this section will inform you of the device's current supply levels. Advanced tips If you want to edit the web page content before printing, you can use an extension from Firefox Add-ons such as Print Edit WE. To print a single image from a page, you can typically right-click it and select or then print using the instructions above. Web pages can set themselves up to appear different on paper to how they look on screen, so don't be surprised to see some changes.
